## CALIFORNIA

## STATE DATA

Based on 2015-2019 American Community Survey population estimates.

## 149,342 stuorpopularow

Women and girls with ancestral ties to countries where FGM/C is practiced

## 51,907

Women and girls who were likely LIVING

WITH FGM/C

## 2,940

Girls who were likely AT RISK of FGM/C

## STATE LEGISLATION AND POLICY LANDSCAPE

STATUS
Deficient Existing ${ }^{1}$ Legislation ${ }^{2}$, Needs Strengthening

IMPROVE BY ADDING
Prohibition of Transporting for FGM/C; Civil Cause of Action; Extended Civil Statute of Limitations; Specification that Culture, Ritual, Religion are Not Defenses to Prosecution; Specification of Mandatory Reporting; Annual Statistical Reporting; Mandatory Training for Law Enforcement; Mandatory Revocation of Medical License

[^0]
## SUMMARY

FGM/C prevalence was estimated at $36.7 \%$ within the study population in California, with over 60\% of the impacted population in the state identifying as Egyptian (32.1\%), Indonesian (19.5\%) or Ethiopian (12.8\%).

It is estimated that 4,756 women were living with Type 3 FGM/C in California. While all survivors may require some level of medical and mental health support, those living with Type 3 would likely require additional medical attention.

79\% of those impacted by FGM/C in California live in one of four metropolitan areas: Los Angeles-Long Beach-Anaheim (40\%); San Francisco-Oakland-Haward (18\%); Riverside-San Bernardino-Ontario (11\%); and San Diego-Carlsbad (10\%).

An estimated 1,150 women and girls from the Dawoodi Bohra community live in California and are not included in the population extrapolation calculation.

## ETHNIC BREAKDOWN

Ethnic breakdown of girls most likely to be AT RISK of FGM/C in California

NOTE: Nigerian and Indonesian girls are likely underrepresented in this data since they are cut at a very young age, resulting in most girls being encoded as already living with FGM/C.

## STATE PREVALENCE RANKING

| LOW | MEDIUM | HIGH |
| :---: | :---: | :---: |
| LESS THAN 100 | BETWEEN 100 AND | BETWEEN 500 AND |
| PER STATE AT RISK | 500 AT RISK | 1,000 AT RISK | BETWEEN 1000 AND

## AGE DISTRIBUTION

Distribution of girls most likely to be AT RISK of FGM/C in California

## SPATIAL DISTRIBUTION

| San Francisco | $\mathbf{3 , 4 7 2}$ | $\mathbf{1 , 0 4 5}$ | 60 |

## CALL TO ACTION

Interventions tailored to the specifics of the context.

State legislators should prioritize strengthening existing legislation.

Prevention and response interventions should focus on the greater Los Angeles-Long BeachAnaheim, San Francisco-OaklandHaward, Riverside-San BernardinoOntario, and San Diego-Carlsbad metropolitan areas.

Child Protection should focus on Egyptian girls between the ages of 6 and 14; Ethiopian girls throughout their childhood and adolescence; and Somali girls between the ages of 5 and 15 .

All estimates are subject to both
sampling and nonsampling error.
